Japanese Patent Application No. 1250560 published October 5, 1989 discloses:
PURPOSE: To realize easy concrete placement with good workmanship, by additively installing a composite composed of a textile woven with strip-shaped films made of synthetic resin and a backing layer, with the textile facing the placement-side of cement. CONSTITUTION: A composite is composed of a textile 1 woven with strip-shaped films 11 made of synthetic resin and a backing layer 2, which is stuck to one side of the textile. The above composite A as an additional material to a concrete panel is additively installed to the inside surface of a concrete panel with the textile 1 facing the placement-side of cement. As the textile 1 faces the placement-side of concrete C, the composite A is easily peeled off from the concrete and the surface of the

concrete C will be in good condition, as surplus water and air bubbles in the placed concrete C can be quickly discharged through meshes of the textile.

Respectfully submitted,
